

SVD robustness checks

a Trait subsampling: per-PC cosine similarity

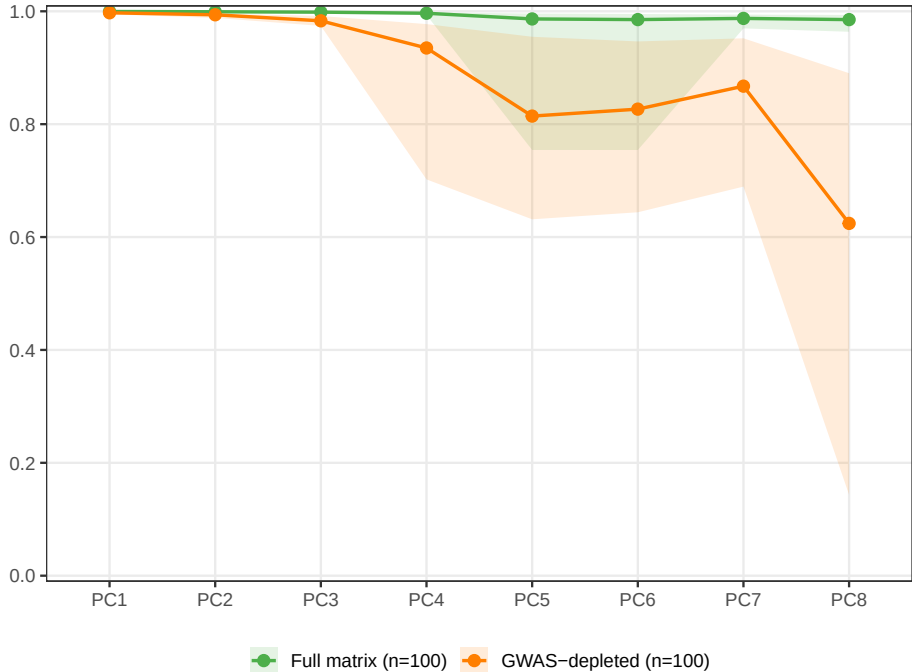

b Trait subsampling: Procrustes similarity

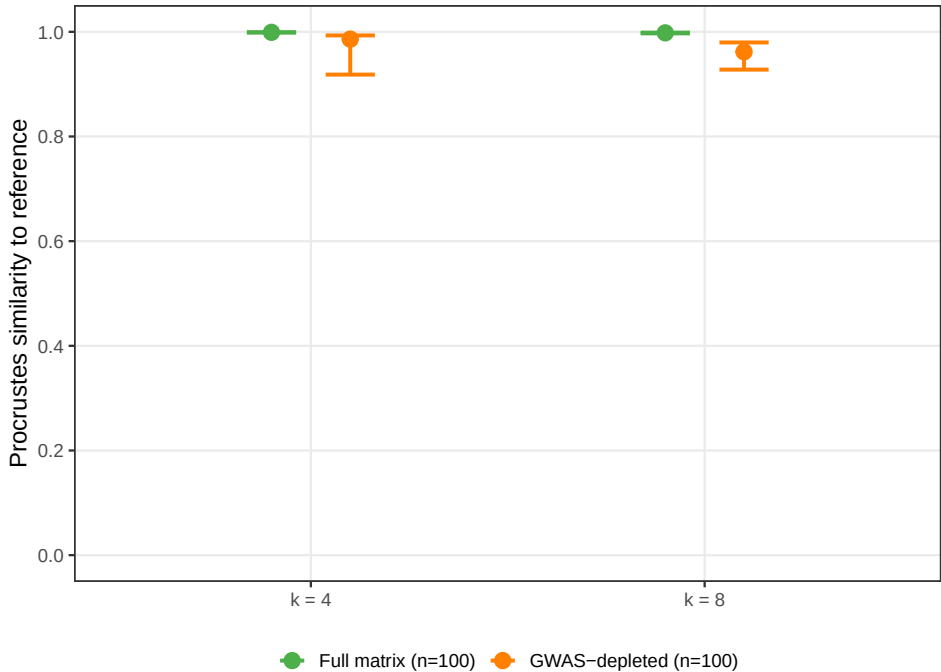

c Window subsampling: per-PC cosine similarity

Reference for each dataset is its own full-set PCA

d Window subsampling: Procrustes similarity

e Leave-one-category-out: cosine similarity (PC1-PC8)

Colour = cosine to original; grey = size-matched null (30 reps, median + 95% CI)
